A guide to preventative maintenance for Albany High Performance Doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in door opening solutions

Preventive maintenance

Have you ever wondered why your car does not break down? Why the engine keeps running or why the brakes keep working? Preventive maintenance is the answer: To replace parts before they break.

Just as a car's tires and oil must be changed regularly, your Albany High Performance Doors have key components that periodically need replacing. Whether it's a spring or a sprocket, changing them before they break is an integral part of Pro-Active Care.

We at ASSA ABLOY Entrance Systems believe in Pro-Active Care. Letting us replace components before they fail keeps your warranty valid and your equipment compliant with regulations. Even more importantly, it ensures the safety and functionality of your equipment, so that you can avoid accidents and losses in productivity.

Ease your mind. Prevent accidents

ASSA ABLOY Entrance Systems retains responsibility for the safe operation and classification of the door, only when user instructions are obeyed and the service checklist and scheduled maintenance tasks are done by a qualified person. If not, the owner takes over all responsibility. The owner must see to it that maintenance is carried out.

With our experienced service organization and extensive spare part offer, ASSA ABLOY Entrance Systems is the ideal partner to secure that your door complies with current norms and regulations.

Top reasons for preventive maintenance

- Keeps the warranty valid
- Prevents unexpected and expensive break-downs
- Prolongs lifetime
- Cost saving
- Minimises risk of personal injury
- Minimises energy loss
- Fulfills legal requirements
- Improves working environment

Ask for a Service Agreement

Our relationship does not end after installation. We understand that your is much more than a passage in or out. With our service agreements, tailored to the specific need of different customers, we keep doors operating at peak performance. A Service Agreement includes scheduled maintenance visits to the door, special discount and reduced response time. However, it does not mean that preventive replacement is automatically carried out. Preventive replacement of parts secures safe and trouble-free operation of your product until the next scheduled service visit.

A cost-saving solution

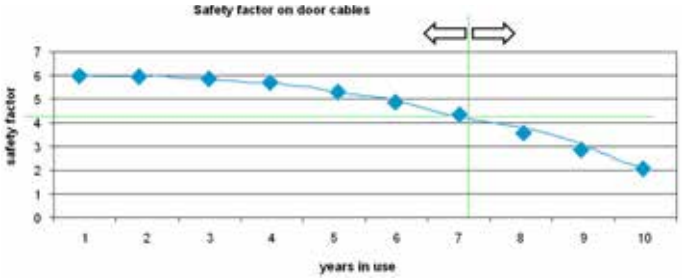

Preventive replacement costs money, but is cheaper than an emergency repair.

If your door has a breakdown, you cannot open it and your internal logistics and processes may come to a stop. Or maybe you cannot close the door and the building is not secured. Someone has to stay on guard, energy leaks out of the building and you have extra callout rate to solve the problem. These are consequential costs. If you plan ahead the scheduled replacement, not only do you save consequential costs, in addition you combine it with the scheduled maintenance visit, so you also save on labor cost and excessive equipment rental, since it is all done in one instance.

Maintenance & Modernization

Safety factor: A business case

The minimum safety factor of door cables is 6. This means the break load of the door cable must equal 6 times the weight it supports. At a 200 kg door, supported by 2 cables, the minimal break load for 1 door cable, must be 1200kg/2 cables = 600kg.

When the safety factor has dropped to 75% or factor 4,5 the cables must be replaced.

Door cables can show many forms of damage, not always directly visible. This is why it is vital to follow the manufacturer's replacement schedule.

Frequently asked questions

"What is the difference between a Service Agreement and preventive replacement?"

A Service Agreement is more than just scheduled maintenance visits. It includes frequent checks of the door or docking system, special discount, extension of your warranty period and prioritising in case emergency service is needed. ASSA ABLOY Entrance Systems has three different types of service agreement, tailored to your needs. With a Service Agreement you are sure that on a scheduled basis operational and safety check are done, but it does not mean that scheduled replacement is carried out. Our service engineer is obliged to inform you in case preventive replacement is needed.

"Why does the product require frequent replacement? Is the durability insufficient?"

At ASSA ABLOY Entrance Systems we put a lot of effort into producing high-quality products. Some parts of your door contain moving components, and like all moving parts, these are subjected to wear & tear and need replacement. Some people forget it, but maintenance starts from day 1. With our experiences in producing and servicing doors we know exactly which parts need scheduled replacements to keep the product safe and operational.

"I have never replaced anything on my door or docking system for the last 10 years. It still works troublefree. Why would I suddenly start replacement of parts?"

You are free to do whatever you choose. The manufacturer only guarantees the safe way of working if preventive replacement on different levels is carried out. Bear in mind that results in the past never guarantee a trouble-free future. Especially after a couple of years.

"Can a component also be replaced before its scheduled replacement?"

Absolutely. If an article is subjected to excessive wear & tear or extreme environments, it must be replaced even before its final date. The scheduled maintenance recommendation is made by the manufacturer and is based on normal use. There are exceptional circumstances which make it possible that these components have to be replaced earlier. So, if the ASSA ABLOY Entrance Systems service engineer advices to replace it, do it! Ignoring his advise means that you take over all responsibility.

"Isn't preventive maintenance expensive?"

No, actually it makes your total costs lower. In the case of scheduled maintenance consequential costs are saved. Do not forget that the costs of down time, energy loss and your time to manage the extra emergency visit of a service engineer. And then we even did not mention the extra cost for call out rates and scissor lift rental. **Important:** On the components that we replace we also give the normal warranty. Preventive maintenance saves money for all!

"I have a door that is not from ASSA ABLOY Entrance Systems. Can I still ask ASSA ABLOY Entrance Systems to perform preventive replacement?"

Yes! ASSA ABLOY Entrance Systems offers an exceptional service organisation and extensive know-how. Because our knowledge is brand independent we are also able to share your liability for non-AAES products. In this case ASSA ABLOY Entrance Systems is your single point of contact for all your doors.

"Where can I find the recommendations from the ASSA ABLOY Entrance Systems service engineer?"

The ASSA ABLOY Entrance Systems service engineer documents his recommendations in the maintenance checklist and logbook. In case parts needs immediate replacement, he will also recommend this personally to you. In the EN directives is clearly stated: Maintenance checks have to be done by competent persons and they have to inform you about critical issues. In case you do not follow the manufacturer's specifications or the service engineer's advice, you take over all responsibility. Let ASSA ABLOY Entrance Systems share this responsibility with its experienced service organization, and carry out the preventive replacements.
