DODD
ENGINEERING (NORTH WEST) LTD

Dodd Engineering design, manufacture & install special purpose machines. Bespoke machines can be manufactured to suit any applications.

Totally automated pick & place machine for the positioning & automatic loading of materials into the car roof trim forming machine at **Lear. Tipton.** Loading cycle 45 seconds, duty 24 Hrs/day.

Special Purpose machine in stainless steel incorporating heater elements, & dip tanks for the etching of electron guns at **Philips Components.**

A purpose built transport & car body shell location line for the totally automatic robotic weld facility at **Vauxhall Motors**, Ellesmere Port.The installation included 4 off lift / transport beds with location tools for both the old & new Astra models,

separate transport & location bed for automatic Perceptron laser measurement and a cross transfer station for maintenance access. The location tools were designed to locate the car bodies within a tolerance of +/- 0.2mm Conveying speeds are at a max. velocity of 90m/min utilising D.C. servo motors.

Steel Fabrications

DODD
ENGINEERING (NORTH WEST) LTD

Dodd Engineering Ltd. Design, manufacture, & install structural steelwork, steel fabrications and special purpose machines

Hoppers for mixing glass silica compounds. Hoppers feed screw conveyors, which in turn feed tube chain conveyors. Built for **Sleurs of Belgium.**

Mixing Tank for specialist paint, including heating jacket. Capacity 10.000 litres. Variable speed 7 kw motor.

1000 KG / HR . Air cooled steam condenser. Manufactured from 316 grade stainless steel. Heat transfer is achieved through 93 off cooling tubes of 25mm O.D. Air movement is from 2 off Woods 2 kw axial flow fans. The unit is fully automatic with temperature sensors in both the inlet & outlet ports.
