Section A-A

n → Hard strata (upto).

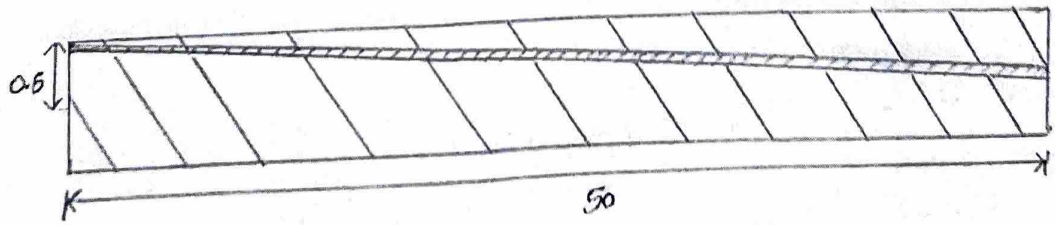

a → 50 mm

Slope Gradient is

$\frac{8000}{50} = \frac{160}{1}$

1 : 160

PIPE GRADIANT

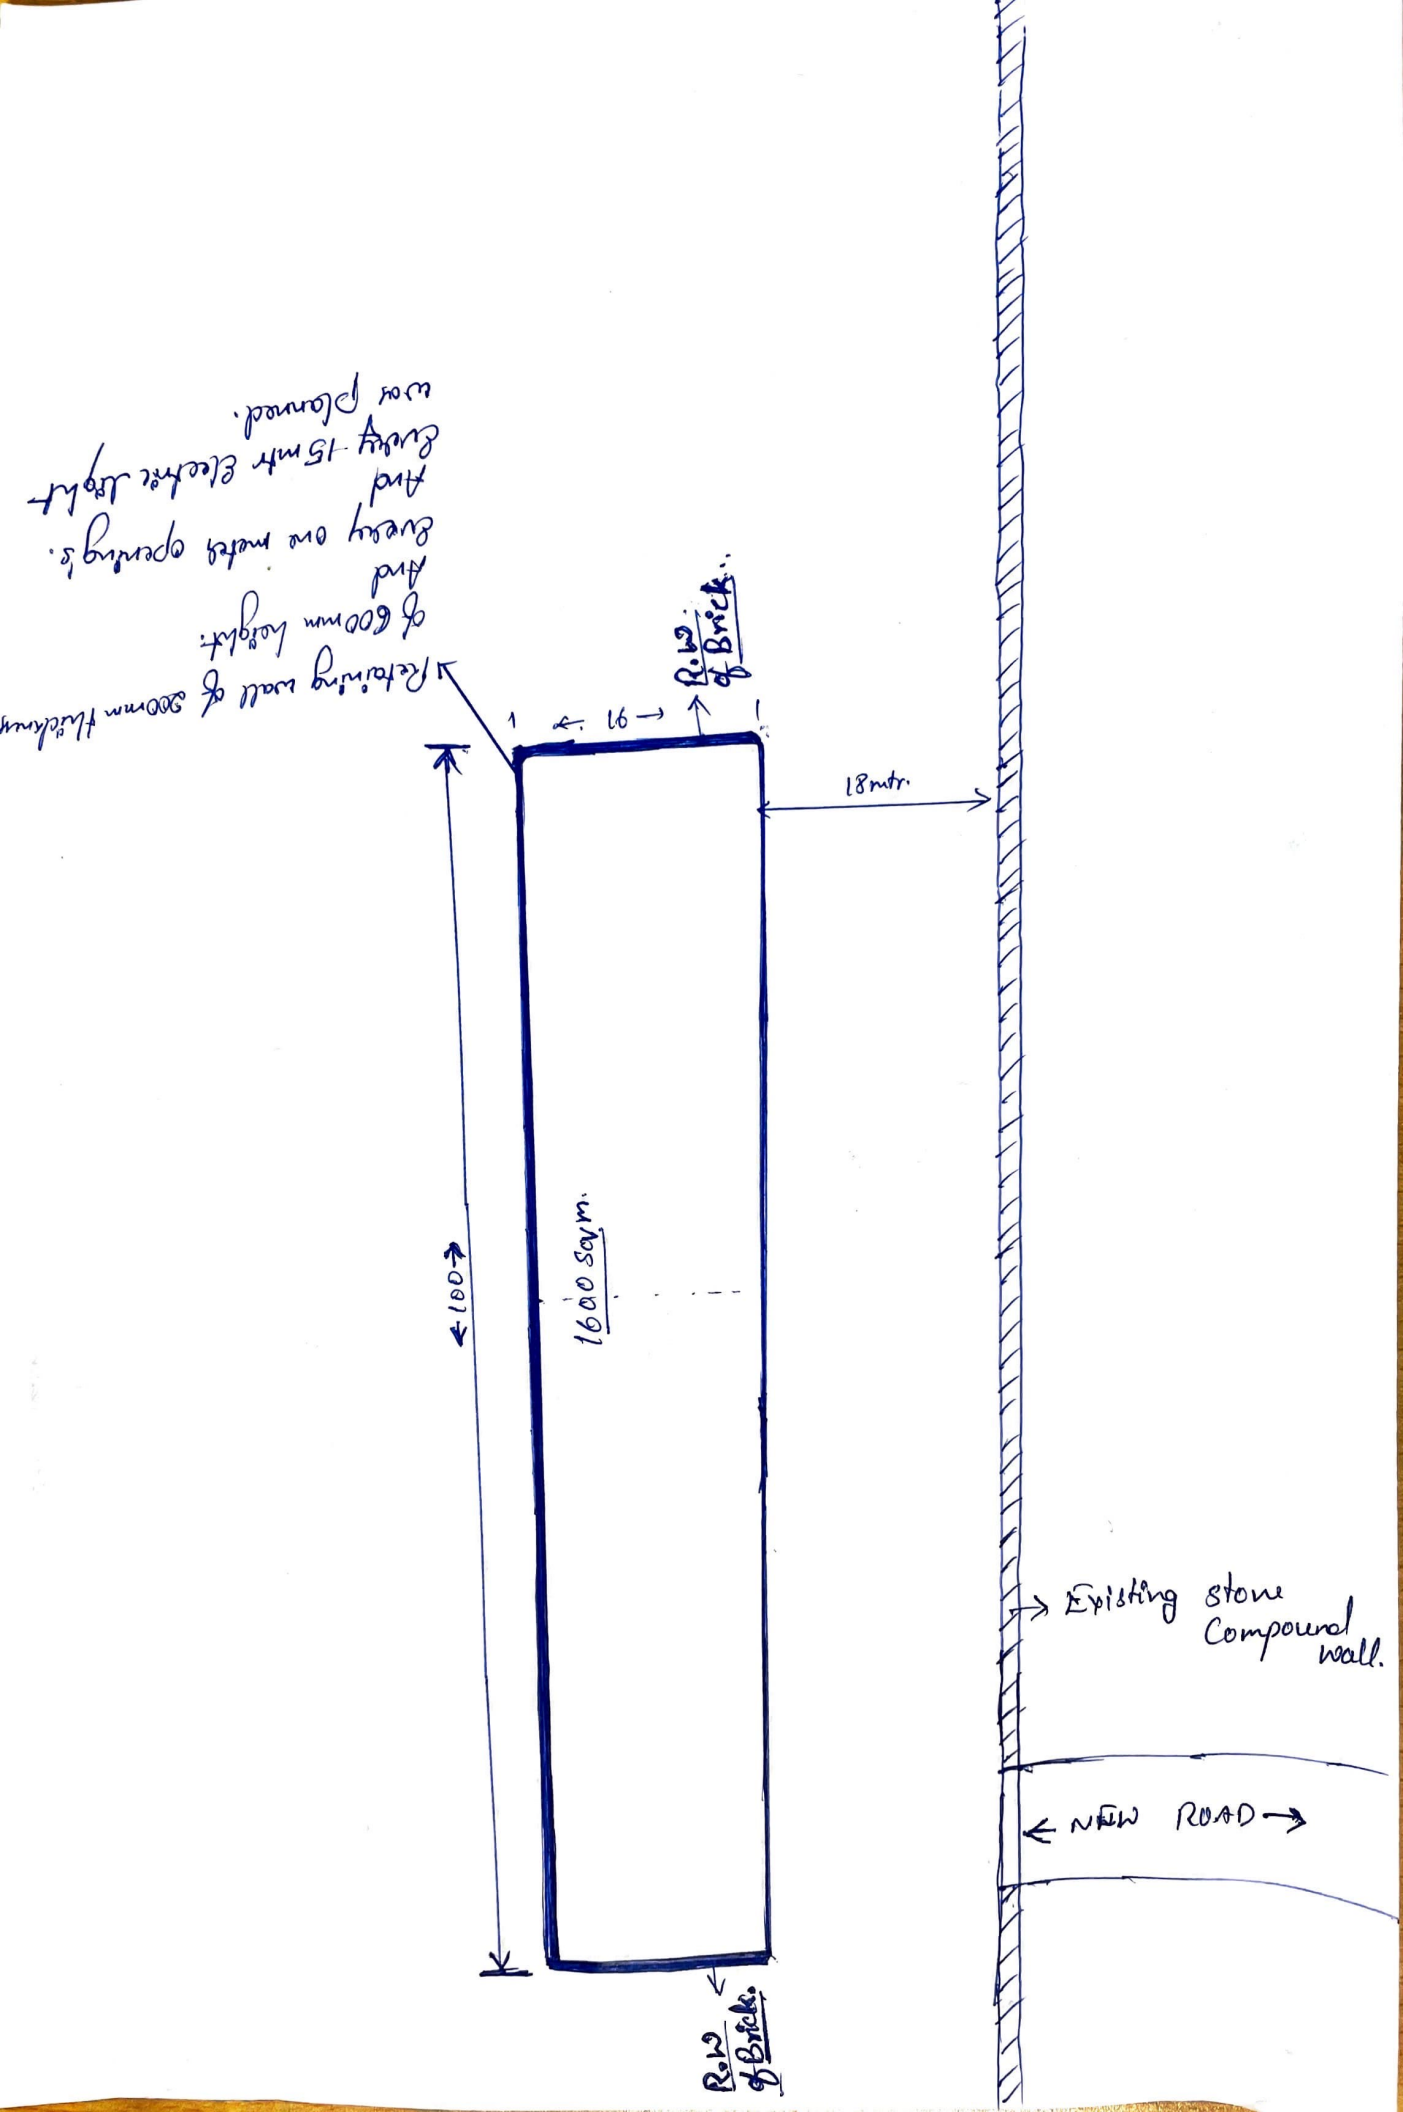

$\frac{50.000}{100} = \frac{500}{1}$

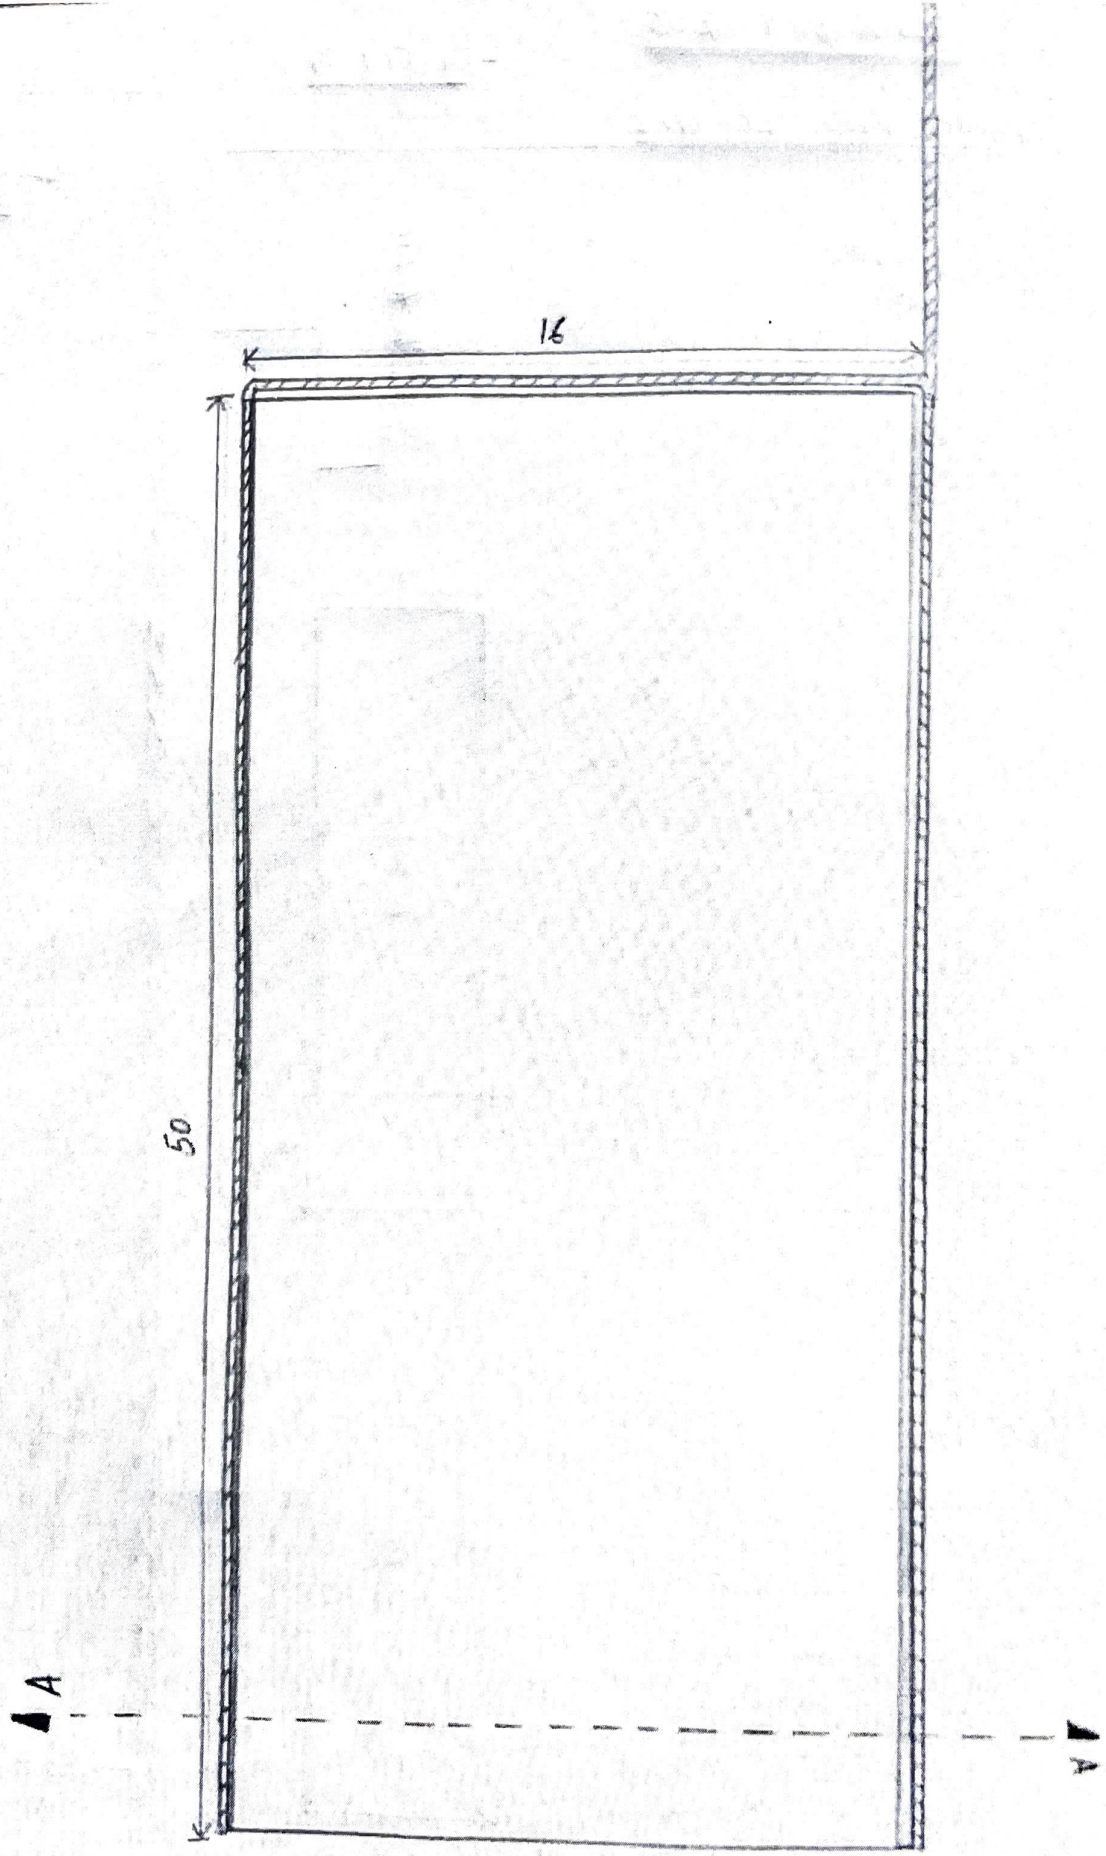

NOTE :- In compound room side 1½ inch pipes are of 40m available.

we require total = 330 mtr − 40m ≈ 300 mtr required.

Slope. 1 : 500

Scanned with CamScanner

Retaining wall of 200mm thickness
of 600mm height.
And
every one mtrs opening is.
And Every 15mt electric light
use planned.
