Sanquin makes use of Besam hermetic doors

Background
Sanquin Blood Supply is a non-profit organization that provides the supply of blood in the Netherlands. In addition, Sanquin also plays an important role in transfusion medicine. Sanquin consists of a blood bank, a research center and a pharmaceutical division. Various medicinal products are produced in the pharmaceutical division, which are provided to pharmacists, hospitals and pharmaceutical wholesalers. In this division, it was necessary to be able to hermetically seal off the rooms from one another to prevent unwanted noise as well as the spread of fires.

The challenge
Hygiene is a crucial factor in the packaging department. All walls and floors must be made of hard material. In addition, glass bottles are used as packaging material. A lot of noise is generated here by the walls, floors and glass bottles, all of which do not absorb any of the noise. The neighboring research departments want this noise to be muted.

As a measure to prevent the spread of fire to neighboring buildings, Sanquin required that the walls as well as the passageway should be fireproof for a period of 90 minutes.

The requirements

- Hermetic doors to artificially maintain the pressure difference between rooms in an optimal manner
- Soundproofed hermetic doors for the packaging department
- Fireproof hermetic doors for a duration of 90 minutes to prevent the spread of fire

Solution

ASSA ABLOY Entrance Systems was chosen as the supplier of hermetic doors due to their compliance with specific needs and requirements in terms of fireproofing, hermetic sealing and encoders. Based on these specifications, the company opted for Besam hermetic doors, which could withstand fire for a period of 90 minutes and which were soundproofed. All hermetic doors are soundproof up to 29dB and are equipped with a fully plane door leaf. Some doors are also equipped with an observation window.

All products are equipped with state-of-the-art technology in the field of passageway technology. In addition, as requested, encoders were implemented to cater to specific door scenarios so that the door opens automatically by pressing a button to prevent the spread of bacteria.

Result

This revised series of Besam hermetic doors fully meets the requirements and needs of Sanquin. The doors are automatically opened and are therefore not sensitive to any potential bacteria residues. The slanted cover and the plane door surface ensure optimum hygiene.

The hermetic door series tests were graded class 4 in accordance with the EN12207 standard for air permeability. The doors are equipped in the standard version with soundproofing up to 28dB and, if desired, can be extended to 41dB. Besam fireproofed hermetic doors have also been tested with regard to their 90-minute fireproof function, in accordance with the latest standard in the fields of fire safety, the standard NEN EN 1634-1.
