Maintenance & Modernization

Modernizing automatic activation units improves customer experience

Analysis showed that in one store, located in a very high traffic pedestrian area, the automatic door sensor was activated on average 6,200 per day, standing open for more than 7 of the 14 hours the store was open.

Background
A major UK retailer, amongst the largest supermarket chains in the country, operates over 1,200 supermarkets and convenience stores, employing around 161,000 UK colleagues.

Challenge
The client promotes an ambitious sustainability policy, with commitment to improving working environment and carbon footprint, by continuously improving business practices. The group investigated possibilities of reducing the amount of time doors are open unnecessarily, focusing on accidental openings. “False triggering” of door sensors by bypassing pedestrians in the high footfall locations of some stores is a major concern.

Requirements
- Cut avoidable energy lost through open doors.
- Offer colleagues a stable working temperature, in all locations and weather conditions.
- Investigate feasibility of existing activation units.
- Analyze door opening data over 5 weeks, trial recommended upgrades and draw conclusions.

As a trusted maintenance partner, ASSA ABLOY Entrance Systems was approached to perform research, data analysis and recommend upgrades.

Solution
Taking objective data from a selection of trial sites, entrance systems specialists provided:
- Besam Eco-Convenience upgrade kit, for all automatic sliding doors in high pedestrian traffic areas, where thoroughfare activates doors.
- Besam Bi-directional activation sensors to ensure doors are only activated by traffic clearly moving towards the store entrance, filtering bypassers.

Result
According to the data provided by before and after comparisons, the modernisation solution reduced activations on average by 38%. This subsequently affected the stand-open time of doors, which fell by over 20% (average) in the test locations, from 7 hours 20 minutes, to 5 hours 49 minutes per day.
