

Distribution & Logistics; DSV in Landskrona, Sweden — New installation

DSV's newest logistics center equipped with ASSA ABLOY Entrance Systems solutions

DSV is a global supplier of transport and logistic solutions that recently relocated and combined its Helsingborg and Malmö operations to a single location in Landskrona. The new logistics center is located directly adjacent to the E6, only 500 meters from the newly built railway station and 2 km from the port. In the first phase, DSV has built a facility of approximately 100,000 square meters, devided on logistics hall (56.000 m^2), transshipment terminal (30,000 m^2) and office (10,000 m^2).

Critical issues:
In distribution and logistics, efficiency is key. The entrances are more than just a way in or out, they're a key component in making things happen when and where they should. With schedules to keep and goods to protect, logistics and distribution facilities place high demands on entrances. Doors and docking systems must be matched to the highly specific business requirements. We were able to meet the high demands of DSV's new transportation and logistics center.

ASSA ABLOY Entrance Systems provided:
- 159 complete Crawford docking stations consisting of a platform including a leveller with telescopic lip, a loadhouse with integraded inflatable shelter, and an electric overhead sectional door.
- Crawford Dock-IN White & Red

DSV required that the doors and docking systems be integrated with the DSV docking system. ASSA ABLOY Entrance Systems enabled its system to integrate with DSV's security and yard management system that automatically directs trucks to an available docking bay. And for the doors and control unit to remain unactivated until the truck approaches the correct docking bay. With this system, DSV also can obtain real time information about which doors and docking bays are in use.

The loadhouses have been built with a sleek outer panel to meet the demands of DSV's high standard.

The results:
The Crawford dock shelter solution improved both energy savings and working conditions. The shelter seals off the vehicle, giving weather protection during the loading and unloading process. The solution begins with a vertically rising Crawford Dock Door. Beyond it is a Crawford SIR Inflatable Shelter with a roller-design top seal that is automatically activated upon the arrival of high or low vehicles. Since the shelter follows the vehicle's vertical movements, the seal remains tight during unloading.

The Crawford Dock-IN White & Red gives the driver a visual target to align the truck with the docking bay to make approaching the dock easy and safe.

ASSA ABLOY Entrance Systems managed with great results to provide DSV with a solution to facilitate their transportation and logistic needs.
