Automatic Retractable Roof

PRANAH:

Inside and Outside View

PRANAH: Retractable Roof systems is designed for homes, bungalows, villas, apartments, swim centers, hotels, restaurants, hospitals, shopping malls, offices and warehouses. This design adds luxury by allowing partial sunlight when entering the site during the day and a view of the sky at night. Retractable Roof can be operated in a variety of ways, including folding roof, sliding roof, telescopic roof, one-dimensional, two-dimensional, vertical lift and horizontal lift.

Automatic Retractable Roof

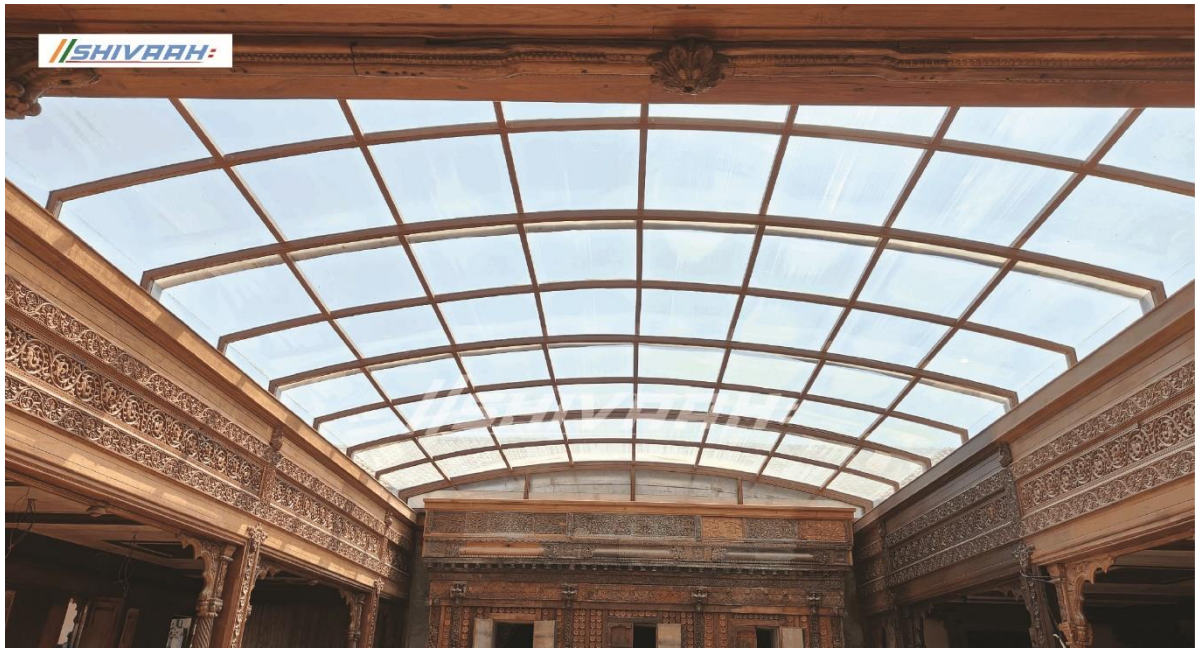

PRANAH:

USP:-

- ✓ Specially extruded non-corrosive Aluminium Profile.
- ✓ Imported Polycarbonate sheet.
- ✓ UV-A & UV-B ray protection.
- ✓ Italian/ German make motor with remote control.
- ✓ High heat resistant EPDM gasket to make the system leak-proof.
- ✓ Stainless steel parts & fasteners.
- ✓ LED light system can be provided as per requirement.
- ✓ RAL Powder coating finish as per requirement.
- ✓ No need of any licence from municipal authorities for terrace roofing's since it is completely retractable.
- ✓ Operation:
  - Remote
  - Push button
  - Manual.

Technical specification Roof :-

PRANAH:

Sr no	Material	Grade
1	Aluminium	High corrosion resistance aluminium grade 6063-T5 (30 years warranty)
2	Polycarbonate sheet	5mm solid + 50micron UV coating (10 years warranty)
3	Hardware and Joining item	Top Quality 304 Stainless steel connection joiner
4	EPDM Rubber	Weather Proof ability
5	Wind Pressure	150KM/HR
6	Motor	Nice make
7	Surface Treatment	Powder coating

PRANAH:

Comparison between Polycarbonate sheet and Fabric :-

Description	Polycarbonate sheet	Fabric
Material Properties	Made from a type of thermoplastic polymer.	Made from fibers, which can be natural (like cotton, wool) or synthetic (like polyester, nylon).
	Known for its durability and impact resistance.	
	Often used in construction, glazing, and protective covers.	
Durability and Strength	Highly durable and impact-resistant.	Less Durability as compare to Polycarbonate sheet.
	Can withstand harsh weather conditions and is often used for safety glazing and protective applications.	Fabric can degrade with exposure to sunlight and harsh environmental conditions unless treated or coated.
Flexibility and Workability	Resistant to UV rays and can maintain clarity over time.	
	Rigid and can be difficult to cut without special equipment.	Highly flexible and easy to cut, sew.
	Can be bent and formed to some extent, but usually requires heat or special techniques.	
Insulation and Thermal Properties	Generally provides good thermal insulation	Less Insulation properties.
	Can be used in applications where thermal control is important.	

Description	Polycarbonate sheet	Fabric
Transparency and Light Transmission	Can be transparent, allowing for high light transmission.	Typically opaque, but some fabrics can be semi-transparent or sheer.
	Often used as a substitute for glass in applications requiring clarity and light flow.	Light transmission depends on the weave and type of fabric.
Applications	Roofing, skylights, windows, protective barriers, greenhouses.	Clothing, upholstery, curtains, tents, and other textile applications.
	Used in areas requiring high impact resistance and transparency.	Used where flexibility, comfort, and aesthetic qualities are more important.
Maintenance	Easy to clean but may require special cleaners to avoid scratching or damaging the surface.	Maintenance depends on the type of fabric.
	Can be prone to scratching if not treated.	Regular cleaning is needed; some fabrics require special care or dry cleaning.
