POLYCARBONATE v/s GLASS		
	POLYCARBONATE PANELS	**GLASS**
Weight (Density)	Light (1.2 Kgs / Sq Mtr) Results in light Steel framing Overall cost saving in structure	Heavy (2.8 Kgs / Sq Mtr) Requires heavy - special steel framing to install Glass
Impact Resistance	Excellent (Upto 250 times more impact resistance than Glass)	Fair
Hail Resistance	Good	Fair (May Break)
Design Life	20-25 Years	Until Breakage
Installation / Work Safety	Excellent (Safe)	Poor (Dangerous)
Leakage	Designed As 100% Leak Free	Requires good workmanship
UV Protection	Both side UV Protected as standard blocking 99.9% UV	Non Standard
Arch Design	Allows Arch design with small radius	Very Difficult for arch design
Light Diffusion	100% Light diffusion available with Anti Glare properties	Non Standard
Solar Smart Technology	Helps in reducing cooling cost of Building while allowing natural light in	Non Standard
Insultaion Properties	Better Insulation properties as compared to Glass	Low Insulation properties
