A guide to preventative maintenance for Albany High Performance Doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in door opening solutions

Sliding/Guiding

What is the function?

- To guide the bottom beam
- To allow movement and reduce friction
- To support the crash function
- To guide the curtain on rigid door blade lamellas
- To carry other parts
- To connect the bottom beam to the curtain tension
- To close gaps for improved safety and reduced air and water leakage)

What is the manufacturer's specification?

To make sure the manufacturer's specifications are observed, replace according to door type related specification sheet

How do they wear?

During the lifetime of the sliding/guiding there will be wear and tear due to:

- Abrasion to the plastic parts
- Crashes
- Aging of plastic parts
- Corrosion of metal parts
- Wearing of pulleys on crash elements

Can I also replace it earlier?

- Yes, if small chips or dust from the plastic parts are visible on the bottom plate
- If the dimensions or shapes of parts have changed due to abrasion
- If there is visible friction on the plastic parts or the pulleys
- If there is noise, moving vibrations or gaps that have become wider

What is the risk of not replacing?

When not following the manufacturer's specifications the customer is taking the responsibility for unintended breakdown, e.g.:

- There may be damage to the side frame, the curtain or both due to the direct contact of metal parts. This will lead to increased wear and more noise.
- Wind load and sealing capabilities are reduced when the plastic guiding is bended
- Alignment of pre-running photocell is not good enough, door stops

Top reasons for preventive maintenance

- Keeps the warranty valid
- Prevents unexpected and expensive break-downs
- Prolongs lifetime
- Cost saving
- Minimises risk of personal injury
- Minimises energy loss
- Fulfills legal requirements
- Improves working environment
