World Class Parking Solutions

Cities now a days are building vertically than horizontally thereby utilising the available space beyond imagination. Parking Systems are based on the same logic where the space for parking 1 car can be utilised to park multiple cars. This increases your ground space utilisation by 10 times than that of conventional parking system.

- Shopping malls
- Residential societies / Apartments
- Hospitals
- Private sites
- Parking lots
- Commercial Building

Benefits:-

- More Parking in less space.
- Eliminate civil work in case of multi-storey parking lots.
- Eliminating need of stairs, lifts, ramps, aisle which is found in malls or multi-storey parking lots.
- Eliminate lighting and other electrical work on each floor of parking lots.
- Cars can be parked door-to-door and bumper-to-bumper, thereby saving additional space.
- No of valet's can be reduced in fully automated paring systems which enables auto car retrieval.
- Sensors & mechanical locks are provided for the safety of lower vehicle.
- Time saving as no need to search for empty car slots and for already parked car.
- Chances of accidental damage, ravage and theft eliminated.
- Easy and immediate car retrieval.
- Both for indoor and outdoor installation.
- Motorised and Hydraulic systems available.
- User friendly operation.

Two Level Stack Car Parking:-

- Car is initially parked on pallet, which is lifted to reasonable height to accommodate another car below it.
- 2 cars can be parked in single parking area.
- This system provides dependent parking system.

Two Level Common Pillar Car Parking:-

- This system is multiple of 2 level parking system.
- It uses common pillar between the two units , which saves the space and hence helps in accommodating more units in limited space.

Two Level Tilted Stack Car Parking:-

- Car is initially parked on pallet, which is lifted to reasonable height to accommodate another car below it.
- Upper Stacker is tilted so as to fit both cars to as minimum height as 3m.
- 2 cars can be parked in single parking area with limited height.
- This system provides dependent parking system.

Three Level Stack Car Parking:-

- Car is initially parked on pallet, which is lifted to reasonable height to accommodate another car below it.
- 2nd car is then parked on the second pallet, which is again lifted to accommodate 3rd car on the ground.
- Hence, 3 cars can be parked in single parking area.
- This system provides dependent parking system.

Two Level Puzzle Car Parking:-

- This system provides independent parking system.
- Easy retention of car.
- Number of columns can be extended as per requirement and available area.
- If N is the number of parking lots then (2n-1) no.of cars can be parked.

Multi-Level Puzzle Car Parking:-

- This system provides independent parking system.
- Pallets move vertically and horizontally generating the combination which will allow any car, irrespective of its location, to be availed by receiver.
- Easy retention of car.
- Number of floors can be extended to maximum of 9 to 10 floors.
- 19 to 91 cars per systems can be parked in space of 10 parking spaces.
