The global leader in door opening solutions

The Gelre Hospital in Zutphen optimizes safety and comfort with automatic doors

Background
The asbestos problem that the previous hospital Het Spittaal was battling marked the beginning of a fantastic project. The question as to whether to restore or renovate the building or to build an entirely new one was an easy one. The best option was to construct a new building for Het Spittaal!

Various automatic Besam doors had been previously installed at a different site in Apeldoorn, so that ASSA ABLOY Entrance Systems was also involved this time in the new build in Zutphen.

Challenge
The doors of the Gelre hospital opened three years following the structural design. The building was built in record speed because the old Spittal hospital was only able to continue for another three years. A new hospital therefore had to be built in this period.

The task involved creating an inviting main entrance with a comfortable entranceway that could accommodate larger groups of people, pedestrians and wheelchair users.

A reception area, restaurant and a shop were all located in the main entrance. The area had to be draft-free to create a pleasant atmosphere for visitors.

The following requirement involved the rear entrance: it had to be a safe and transparent entrance that could also be used in the event of an emergency. The provision of various silent automatic doors within the hospital was also a very important aspect, as patients should not be disturbed by noises at night. In addition to the noise requirements, safety and comfort were also crucial.

The requirements
- A draft-free entrance area with a comfortable entranceway to accommodate various groups of people
- A safe entrance that can also be used in the event of an emergency
- Silent automatic revolving doors that are convenient and safe

The solution

- Besam UniTurn revolving doors are optimally suited for large groups of people and wheelchair users
- Besam RD4 revolving doors with panic exit for use during emergencies
- Besam UniSlide automatic sliding doors to prevent the formation of dust
- Besam SW100 swing doors for added noise prevention and low energy consumption
- Besam PowerSwing door operators, ideal in situations in which draft is an issue

A Besam UniTurn is integrated in the main entrance as this type of door provides a safe and comfortable passageway for large groups of visitors and wheelchair users. The two large door wings separate outdoor and indoor climate in order to prevent the formation of draft. An esthetically pleasing benefit of the UniTurn are the display areas at the end of both door wings, which can be filled with decorative material to give the entrance area an even more friendly appearance.

In the rear entrance, a Besam RD4 revolving door has been installed. This door has nice thin profiles, which gives the door a beautiful and transparent look. In addition, it comes equipped with an efficient panic exit for use during emergencies.

Besam UniSlide automatic sliding doors have been applied in various wings of the hospital. The sliding door systems have beautiful round profiles, round vertical glass window bars and comfortable slanted window bars that prevent the formation of dust.

For the interior doors, the hospital opted predominantly for Besam SW100 swing doors and a number of Besam PowerSwing door operators. The great advantage of SW100 is its silent function and it also offers optimum security, comfort and has low energy consumption. The Besam PowerSwing is ideal in situations in which there is a high degree of wind pressure.

Result

ASSA ABLOY Entrance Systems is proud of the contribution it has made to the Gelre Hospital in Zutphen. The entrance solutions ensure optimum access for everyone. Plus the entrance also keeps the draft out. The revolving doors also function silently, so that patients get the rest they need and are not disturbed by any noise made by the door.
