A guide to preventative maintenance for Albany High Performance Doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in door opening solutions

Counterbalancing

What is the function?

- Support drive unit
- Emergency egress
- Smooth door running
- Fulfill regulations regarding fall-down protection
- Reducing closing forces

What is the manufacturer's specification?

To make sure the manufacturer's specifications are observed, replace according to door type related specification sheet

Can I also replace it earlier?

- Yes, if the dimension between the spring windings are not the same
- If the ropes fray and the belts get rips
- Abrasion of pulleys
- Noises from bearings / pulleys

How do they wear?

During the lifetime of the counterbalancing there will be wear and tear due to:

Springs

- Force of the spring is lowered after time
- Corrosion of spring

Ropes / textile belts

- Fray due to movement over the pulleys Forces on ropes and belts

Pulleys

- Friction of rope over pulleys. Drag force of the rope/belt
- Ageing of bearing due to corrosion / abrasion

What is the risk of not replacing?

When not following the manufacturer's specifications the customer is taking the responsibility for unintended breakdown, e.g.:

- There may be much higher costs for repair due to further damage
- The door may not work and may not be safe anymore (regulations / no catching / high peak forces)
- Lose of functions like emergency opening
- Overload of drive system due to loss of support function

Top reasons for preventive maintenance

- Keeps the warranty valid
- Prevents unexpected and expensive break-downs
- Prolongs lifetime
- Cost saving
- Minimises risk of personal injury
- Minimises energy loss
- Fulfills legal requirements
- Improves working environment
