door opening solutions

The NEW ASSA ABLOY OH1042S

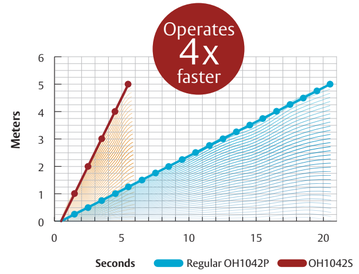

Optimized speed for productive workflow

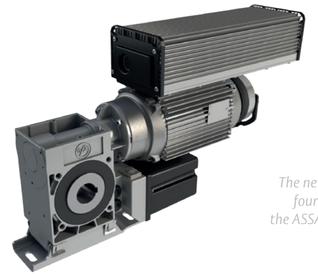

Use speed to help your business

Efficiency is essential to the success of any operation. For industries with a need for large doors, speed can be a valuable asset. If you have frequently used doors, vehicles of different height, concerns of temperature control, regular door-collisions, or an interest in reducing drafts and dust – the advantages of speed will be crucial. A reinforced door and a modified motor and control system provide this door with that extra burst of speed.

This new overhead sectional door opens at a speed of one meter per second – four times faster than a standard overhead sectional door to save you an average of 20 seconds per cycle, and giving you time to be more productive.

Robust panel sections and door hardware are durable enough to handle the speed and withstand wear to assist the door's performance without resistance. All to ensure that the door runs as smoothly as your business.

The new motor operates four times faster than the ASSA ABLOY OH1042P

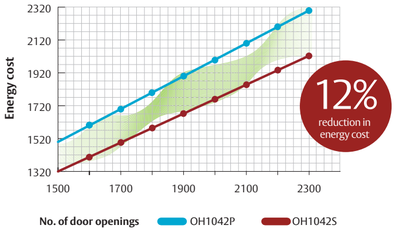

The NEW ASSA ABLOY OH1042S

Efficient engineering to save time, energy and money

Reduce energy consumption without disrupting your enterprise

The fast performance and tight seals of the door mean you can easily maintain indoor temperature, reduce energy consumption and save money. Using less energy also reduces your CO_2 emissions and helps you on the path to becoming energy neutral.

The new ASSA ABLOY OH1042S prepares you for the future. By reducing energy expenses by 12% (compared to a regular overhead sectional door), this door helps your business to be more cost and energy efficient – two elements that are necessary to thrive tomorrow.

The NEW ASSA ABLOY OH1042S

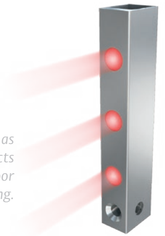

Integrated safety systems to improve your work environment

Solving both safety and comfort concerns

Speed generates a safer and more comfortable workspace for employees. A fast closing prevents strong drafts that bring cooler temperatures and dust from the outside – protecting those inside. This allows safety and comfort to permeate the entire work place, beyond the gateway itself.

New features have been introduced to increase peace of mind for business owners. The faster opening speed results in fewer collisions and lower repair costs.

The OH1042S is equipped with a touch-less light grid system that stops the door immediately if it detects any object obstructing the door opening. Giving you – and your employees – less to worry about.

An intelligent light curtain acts as a touch-less safety system that detects and protects any obstacle in the door opening while the door is closing.

The NEW ASSA ABLOY OH1042S

A complete door to meet your business needs

The full package with dedication to detail

The new ASSA ABLOY OH1042S from ASSA ABLOY Entrance Systems is a premium, future-thinking solution to let your business be busy.

Precision engineered, each component of the door is safe, reliable, durable and tightly-sealed so it can withstand frequent use and resist all weather conditions.

As we manufacture every door, every component undergoes strict quality control and gives us the ability to customize your door for your industry.

Our commitment to customers guarantees professional deliveries, fittings and 24-hour call service to make sure you always have assistance when you need it.

ASSA ABLOY ENTRANCE SYSTEMS
Maintenance & Modernization

Fast and agile

Smooth and silent, the frequency-converted operator is a combination motor and control system that can open at 1 m/s without special wall reinforcement requirements.

Close tight from the top

The double-lip, rubber top seal is mounted in a special profile for optimal insulation between the panel and the wall.

Sections built to last

The finger-safe section joint has superb load distribution to reduce the risk of cracks while a broken cold bridge lowers energy consumption.

Airtight on all sides

The side seal features a double-lip and insulation chambers for a tight seal between the tracks and door leaf.

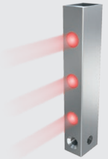

Keep things rolling smoothly

Double adjustable wheels give the bogie roller a smooth performance while the low-friction roller bracket makes it silent and secure.

Water-resistant and innovative bottom seal

The O-shape of the flexible rubber bottom seal provides continuous pressure for maximum sealing, shock absorption and condensation protection.

Improved safety system

An intelligent light curtain acts as a touch-less safety system that immediately detects and protects any obstacle in the door opening while the door is closing.

The NEW ASSA ABLOY OH1042S

Modify your door to fit your business

Flexible for your needs

This new overhead sectional door is built with flexibility in mind. You can configure your door for optimal performance in your industry. There are literally thousands of possible configurations. Add more windows if your business would benefit from more light. Or go with a high-lift track system if you need the extra height in your opening.

You can specify things such as door size, lock system, and track options to give your workplace exactly what it needs. Choose from a range of eleven colors or opt for your own factory-painted color to complement your building's facade and your work interior.
