GENERAL NOTES

1. All dimensions are in mm unless noted otherwise.
2. All design units are in KN and meter.
3. Design Codes and Specifications :
   - i. DESIGN CODE : IS:800-2007(LSD) WITH CHP-12
   - ii. WIND CODE : IS:875(Part 3)-2015
   - iii. SERVICEABILITY: IS:800-2007(LSD)
   - iv. WIND APPLICATIONS : IS 875-2015 (PART-3)
   - v. SEISMIC ZONE : II
   - vi. STAAD.PRO : STAAD PRO : CONNECT EDITION (V22.08.00.175)
4. Loads :
   - i. DEAD LOAD ON FRAME : 0.2 KN/SQ.M.+ Self. Wt.
   - ii. LIVE LOAD ON FRAME: 0.75 KN/SQ.M.
   - iii. COLLETRAL LOAD ON RAFTER & PURLIN : 0.30 KN/SQ.M (ON ROOF)
   - iv. WIND SPEED : 44 M/SEC.
   - v. SOLAR PANEL LOAD : 0.3 KN/SQ.M.
   - vi. HVLS FAN LOAD ON PURLIN : 100 Kg(POINT LOAD ON EACH PURLIN)
   - vii. HVLS FAN LOAD ON RAFTER : 1000 Kg(POINT LOAD AT THE CENTER OF SNAP @ RIDGE)
5. General Specifications :
   - i. ANCHOR BOLTS :
     - b. Anchor bolts will be black unpainted.
   - ii. PRIMARY MEMBERS :
     - a. Built up members are made from hot rolled plates conforming to ASTM A572 Grade 50/IS2062 E350 or equivalent with a minimum yield strength of 350N/Sq.mm (MPa).
     - b. Continuous machine submerged arc weldings (S.A.W) meets the applicable requirements of American Welding Society,
     - c. Web to flange welds are DOUBLE SIDE fillet welds in accordance with the 9th edition of AISC table, J2.4
     - d. Web-Butt welds are complete penetration using flux back-up (upto 16mm plate Max.)
     - e. Color code : 1) ONE COAT OF PRIMER - ZINC SILICATE PRIMER 75 MICRON DFT; 2) TWO INTERMEDIATE COAT OF HIGH BUILD EPOXY M10 COAT (2 X 75 MICRON DFT)

     Finish Code : FINAL COAT OF ALL PHATIC ACRYLIC POLYURETHANE (50 MICRON DFT)
   - iii. SECONDARY MEMBERS :
     - a. All secondary members are cold formed sections like Z and C conforming to ASTM A653M, Gr-50/ BIS277 GP350 or equivalent. with a minimum yield strength of 350N/Sq.mm (MPa). if they are black shall conforming to ASTM A568 Gr-50.
     - b. Color code : PRE GALVANIZED-275 GSM

     Finish Code : PLAIN
   - iv. BRACING AND ANGLES :
     - a. All bracing rods conforming to ASTM A36M Gr.36/IS:2062 or equivalent) with a minimum yield strength of 250N/Sq.mm (MPa)
     - b. All bracing angles conforming to IS:2062, Grade-A or euivalent with a minimum yield strength of 250N/Sq.mm (MPa)
     - c. All Flage braces & Sag Angle sections conforming to ASTM A36M Gr.36/IS:2062 with a minimum yield strength of 250N/Sq.mm (MPa)
     - d. All Square & Round Tube sections confirming to IS 1239 Part 1 & IS 1161 for Round pipe, IS 4923 for square pipe with a minimum yield strength of **310** N/sq.mm (Mpa)
   - v. ROOF, WALL SHEET AND FLASHINGS:
     - a. The yield strength of all panels and flashings is 345/550 MPa. and shall conform to ASTM A792M Grade-B/ BIS 15961/15965, AZ150.
     - b. Roof sheet Color code : 30 MM THICK COMPOSITE SANDWICH PANEL

     Roof monitor roof&wall sheet color Code : NA

     Wall sheet color Code : 50mm thk. SANDWICH PANEL COLOR GALVALUME

     Flashings & TRIMS color Code : COLOR GALVALUME

     Gutter/Down spouts color : COLOR GALVALUME
   - vi. FASTENERS :
     - a. Mild Steel Machine Bolts (MSB) with HDG are Gr 4.6 IS1367 type1.Zinc Plated (10 Microns)
     - b. High Strength Bolts (HSB) with HDG are 10 Microns Yellow Passivation and are identifiable by marks on bolt head and are conforming to IS 1363 / IS 1364 (Grade-8.8).
6. Tolerances :
   - a. Fabrication tolerances shall confirm to requirements of IS : 7215-1974-Reaffirmed in 1995.
   - b. Erection Tolerances shall confirm to requirements of IS : 12843-1989-Reaffirmed in 1995 .
   - c. Cutting tolerance shall be as follows: For members connected at both ends + or -1 mm. Elsewhere + or -1 mm.
7. Anchor Bolt Setting :
   - a. All anchor bolt diameters are in mm, Anchor bolt projection must be according to design and threads to be clean.
   - b. Anchor bolt shall be set perpendicular to the theoretical bearing surface unless noted otherwise.
   - c. The installation of Anchor bolts and embedded items must be done in accordance with the code of standard practice for steel buildings of AISC section 7.
   - d. Anchor bolts and foundation bolts shall be set by the owner or(his Civil contractor) in accordance with Arcedges "ISSUE FOR CONSTRUCTION ANCHOR BOLT PLAN".
   - e. Arcedges assumes no responsibility or liability for the column foundations, slab design for construction. Foundations should be designed as a minimum for the given reaction load.
   - f. Bracing reactions are to be considered with the main frame reactions.
   - g. The slab or edge beam should be square and level to within 5mm tolerance. Anchor bolt threads should be projected during concreting operation and thoroughly cleaned after pouring.
   - h. Arcedges will assume minimum grade of concrete as M25 for pedestals.
   - i. Before commencing the erection of the building the erector must read Arcedges erection manual.
8. Roof / Wall Bracing & Secondaries :
   - a. Bracing is to be installed as per the erection drawings and must remain tight during the life time of building. Do not remove any bracing without prior written consent of Arcedges.
   - b. Placing permanent bracing and temporarily guying the structure during erection prior to placing sheeting is extremely important. The removal of permanent bracing and/or providing the insufficient temporary guy lines may cause the collapse of the building during or after erection which will be contractor's responsibility.
   - c. Start erection at Braced bay.
   - d. Use temporary guy wires and ratchet pullers for stability.
   - e. Install permanent bracing i.e., cables, rods, angles and flange braces.
   - f. Guy wires should be attached to an immovable object such as cast in anchor bolts or heavy object.
   - g. Plumb and align the first bay before proceeding.
   - h. Use High strength bolts where indicated and tighten all bolts after final alignment of the building.
   - i. Use temporary supports to align girts before fixing sheets and do not apply any live loads to purlins before roof sheeting is completed.
   - j. For aesthetic reasons, it is preferable to install flange braces at the same of the column/rafter. The side chosen depending on erection sequence when they are required on single side only.
9. Sheeting, Trims & Flashings :
   - a. Panels are to be field cut to suit openings.
   - b. Bead mastic shall be placed carefully over the panel profile to avoid stretching.
   - c. Trims are provided in Arcedges standard lengths. Trims quantities are provided to cover the whole length of the building using 76mm end laps (refer respective details). If lap length exceeds 76mm during erection, then shortage of length may result. If the lap length is reduced then leakage and appearance problems may result. Always cut any excess trim length at the end of the trim line.
   - d. Downspouts can be relocated at site, if required to avoid at wall accessories.
10. Mezzanine :
    - a. This Mezzanine designed for :
      - i. DEAD LOAD : NA
      - ii. LIVE LOAD : NA
      - iii. COLLATERAL LOAD : a)50 MM THICK FLOOR FINISH NA; b)SERVICES & FALSE CILEING NA; c)SUNK FILLING NA
      - iv. FALSE CEILING LOAD : NA
    - b. The design of the concrete slab and steel reinforcement or wire mesh placed in concrete is not the responsibility of Arcedges and must be designed by a qualified civil engineer in accordance with the correct concrete compressive strength using recognised building codes.
    - c. The concrete slab (Not by Arcedges) should be designed to carry the dead load, the full live load and any additional floor finishes loads depending upon the deck.
    - d. The mezzanine deck panels are designed to carry only the weight of concrete thickness and construction live loads.
    - e. Concentrated loads, due to storage of materials and heaping of concrete during casting should be avoided.
    - f. Small openings in the mezzanine slab (not by Arcedges) between steel joists can be made without affecting the steel mezzanine framing. Proper reinforcement around the opening should be provided in the slab by the Civil Contractor.
    - g. Depth of concrete including deck sheet is NA
    - h. Yield strength of all deck panels shall be 350MPa and made of Galvanized material.NA.mm deep with.NA.mm thickness conforming to ASTM A653M / BIS277 GP250.
10. Crane : (1)
    - i. Crane Capacity : #1-2 MT
    - ii. Crane Weight : 10.42 MT
    - iii. Crab Weight : 0.75 MT
    - iv. Wheel Base : 4 M
    - v. Wheel Load : 5.15 MT
    - vi. Crane Head Room : 1.079 M
    - vii. Hook End Approach : 2.3 M
11) Walkway considered with one side hand rail
    - i.WALK WAY LOADS : 150 KG/M²
12) 6mm thk. chequered pl. considered for crane walkway.
12. Important Erection Notes :
    - a. The building must be erected according to the erection drawings and safe erection practices.
    - b. If Arcedges is not erecting this building, then the erector must read the erection manual before starting the erection. For any technical assistance contact Arcedges customer service manager.
