The global leader in door opening solutions

"The difference is in the refinement of the door – technically and aesthetically."

Philippe Samyn

Philippe Samyn, Architect & Engineer, Samyn and Partners, Belgium

ASSA ABLOY Entrance Systems

Specs, rules and architecture

From planning and design through to construction and delivery, architects, engineers and specifiers face a multitude of challenges. As celebrated Belgian architect Philippe Samyn says, the devil is in the details. And great specifications can go a long way to getting the details right.

EVERYDAY PROCESS
Unique building sites, strict building regulations and tight budgets can place restrictions on even the smallest construction projects.

FINAL PRODUCT
Furthermore, key issues such as functionality and aesthetics can have a profound impact on the final design. The risk is, that with little control over specifications throughout the project, the delivered building can fail to meet client – and ultimately end user – expectations.

WHY ENTRY?
Entry examines the everyday issues that affect architects, engineers and specifiers. Because we believe that every aspect of your design, from the grandest vision to the smallest detail, contributes to the creation of a livable, joyful and sustainable building.

Covering the issues

To understand the best way to develop and specify entrance systems for any kind of building or construction project, it is essential to have a deep understanding of the issues architects and engineers face everyday at work. The world of construction is changing fast. Navigating the labyrinth of new regulations, technologies and environmental demands can be a minefield.

Through years of communicating and working with architects, we have identified five themes which encapsulate these issues. Our team of consultants have the tools and experience to guide you in specifying entrance systems that cover your project's issues.

SUSTAINABILITY

In the U.S., buildings alone account for about 40% of CO_2 emissions. So energy efficiency is paramount during the design, construction and occupation of every new build. This is reflected in ever-changing rules and regulations that often vary from country to country.

COMPLIANCE

Not only are rules and regulations changing all the time, they are also becoming increasingly demanding. It is essential that specifications not only comply with current regulations, but are also sufficiently flexible to meet requirements on future projects.

AESTHETICS

The best clients have a vision for their building. Even though the design, right down to detailed specifications, has to comply with demands for sustainability, building regulations and budget constraints; it's crucial that this vision makes it from design to delivery intact.

FUNCTIONALITY

A successful building is a livable building: one that is not only fit for purpose, but also for people to thrive in. Function dictates so much more than the building's form. It is embedded in every detail, defined by specifications that stay true to the original purpose and spirit of the building.

PROJECT & PROCESS

No matter how big or small a project, its success depends on an efficient, flexible workflow. To counter budget squeezes, delays and resource issues, it is important that all lines of communication remain fluid and transparent at every stage of the process.

The design and build process

From a specifier's point of view, the building process is about maintaining the integrity of the client's vision from inception to final delivery.

ESTABLISH NEEDS ›

The client outlines their needs and articulates their vision for the building.

PLAN THE BRIEF ›

Stakeholders detail the building's performance criteria.

DESIGN THE BUILDING ›

Architect and/or engineering firm receives the brief and brings the client's vision to life.

PUT TO TENDER ›

Building contractors bid to win the building contract.

DEFEND SPECIFICATIONS ›

Specifiers make sure their specifications are not compromized during construction.

DELIVER THE BUILDING ›

The building contractors hand over the final building to the client.

SUSTAINABILITY

Take the lead

Sustainability is firmly on the agendas of policy makers worldwide. And today, all new buildings have to meet the needs of the present without compromizing the lives and well-being of future generations. In this environment, you need to stay on top of complex and rapidly changing legislation. And you need to specify materials and fittings capable of reducing energy costs and meeting targets, whether they are driven by U-values or R-values.

Energy-saving measures
Owners of building projects are generally prepared to invest in energy-saving measures during design to keep future running costs as low as possible. So working with a supplier who makes sustainability targets their business means you can deliver energy-saving, cost effective specifications for your client.

Designed to reduce energy usage
ASSA ABLOY Entrance Systems offers a full range of entrance systems that are designed to reduce energy usage, no matter which model of door your project requires. You can specify doors with low U-values, speeds that are efficient for their purpose, and intelligent sensors to prevent unnecessary opening. And thanks to the modular design of our doors, upgrades can be made to meet the demands of the future.

COMPLIANCE

Own the rules and regulations

Compliance is a daily reality of every project you work on. But navigating the labyrinth of standard building regulations, compulsory safety norms and specific local regulations is as painstaking as it is crucial. So it can be a big help to draw on the guidance of suppliers whose products comply with the regulations, and who are prepared to work with you to make sure your specifications meet all requirements.

Go beyond minimum specifications
With global knowledge and understanding of local building regulations, ASSA ABLOY Entrance Systems can ensure that all of our doors go above and beyond minimum safety specifications wherever they are in the world. In-depth, verified knowledge of product performance means you can be confident that your doors are compliant.

Global leader in EPD

In order for a building project to meet sustainability targets, you need detailed information about the materials you and your suppliers propose to use. This includes knowledge of where the materials are sourced, how they are made and how they are distributed.

Only then can you document your building's environmental impact and get a clear picture of the building's projected lifecycle. Environmental Product Declarations (EPD) are internationally standardized tools that give you the information you need so you can set realistic standards for sustainability – and achieve them.

ASSA ABLOY Entrance Systems is a global leader in EPDs with the world's largest catalogue of EPD registered components and products.

We want to ensure complete transparency in our manufacturing so you have complete control over the design and implementation of your buildings down to the finest detail. We believe that green building is a crucial tool to combat climate change.

THIRD-PARTY VERIFIED EPD Institut Bauen und Umwelt e.V.

BREEAM and LEED

Worldwide sustainable certification systems are helping change the way we think about how buildings are planned, developed, built and maintained. There are two key certifications you will no doubt be familiar with.

The most widely used third-party certification method of sustainability assessment is called **LEED.** US in origin, LEED encourages sustainable design through an award system.

On the development side, **BREEAM** is a sustainability certification embedded in UK building regulations. BREEAM places great importance on collaboration in order to have sustainable methods and ideas running through the entire development process.

Our in-depth knowledge of these important certification systems means our consultants can ensure your doors meet the standards you require.

BREEAM®

"You need bright clients. You need the client who has the means to achieve his dream."

AESTHETICS

Harmony through materials, light and everyday life

The integrity of your vision runs through every element of your building's design. So, not only is it important to specify the materials, features and fittings that fulfill the brief, it's also important to defend these specifications throughout the construction process. Only then will you comply with all regulations and help your clients achieve their dream.

A multitude of options
The ASSA ABLOY Entrance Systems range is flexible in configuration with a multitude of options for different finishes, colors and additional features. On a local level we also offer personalized product development to create entrance systems that are tailored to your project. And we are always on hand to make sure that your specs – and your vision – make it through to the final building.

FUNCTIONALITY

Make livable buildings

Whether you're working on a hospital, day center, or distribution center, how you resolve and express the building's function will go a long way to meeting your client's needs. Working with specifiers who have the means and expertise to overcome issues of flow, ventilation and services gives you the freedom to design the building your client desires without compromising on performance or functionality – and create a truly livable building.

The right performance for your project
The full range of ASSA ABLOY Entrance Systems gives you the flexibility to choose a door which performs for your project. And if you need something a bit different, our product development team will help you get what you need. The safety and automation features of all our doors can be specified to your project's requirements.

PROJECT AND PROCESS

Keep the big picture simple

Project bottlenecks are often due to budget constraints or a breakdown in communication. Projects have a better chance of running smoothly with suppliers who keep lines of communication open, uphold the integrity of your design and maintain flexibility when it comes to issues that affect the whole project.

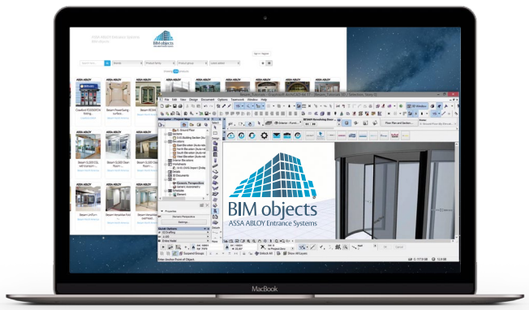

Aim for an easier everyday
ASSA ABLOY architectural and specification consulting services aim to make every day of your project easier. With a focus on transparent and efficient communication we can assist on many process issues, from the writing to the defense of specifications.

BIM represents the future

Building Information Modeling (BIM) is more than an increasingly valued tool for architects. It facilitates nearly all of today's complex new builds. Enabling you to visualize a project's physical and functional characteristics, BIM shows your client exactly what they can expect of their building whether it is staircases, windows, or doors.

Control over your specifications
BIM archives every single detail, fitting and material so you always have control over your specifications at any stage of the design and construction process.

Online library of BIM objects
ASSA ABLOY Entrance Systems has a complete online library of BIM objects. In addition, if you can't find what you are looking for, your local ASSA ABLOY Entrance Systems team can assist you with BIM guidance and development for your specific project.

"Architects should use BIM to turn their visions and dreams into truly livable buildings."

CONSULTANCY FOR ARCHITECTS

Every entrance matters

Our experts are always on hand to help make your job as easy as possible. We write and defend specifications, help you plan the flow of goods and people, provide you with drawings, and assist with BREEAM and LEED certification. We are also on hand to assist with product development. So if your building requires a door with a unique feature, we will step up to the task.

ASSA ABLOY Entrance Systems consultancy services

- Project management and budgeting
- Specification, drawings and bespoke solution design
- Safety standards, codes and regulations compliance
- Planning the flow of goods and people
- LEED and BREEAM consulting
- BIM objects

Solutions from ASSA ABLOY Entrance Systems
We offer a full range of entrance systems and the opportunity to work with our consultants on developing customized doors, so you can find the perfect solutions for your project.

- Automatic doors
- Industrial doors
- High-performance doors
- Hangar Doors
- Loading dock equipment
- Service
