

DESIGN & OPERATION

1.Two doors are connected to each oter via hinges so that they can be folded w.r.t each other. Same design is repeated on other side.

2. motors are provided on top & bottom for smooth operation .

3. top motor is connected to 1st door hinge via chain sprocket mechanism.

4.Bottom motor is connectes to second door using chain sprocket mechanism.

5.Bottom chain sprocket mechanism is embded in bottom track.

6. When swched onn both the motor operates at the same time. therefore generating equal forces through out the door structure.
