Safety

Convenience

Restraint system connecting the trailer to the building

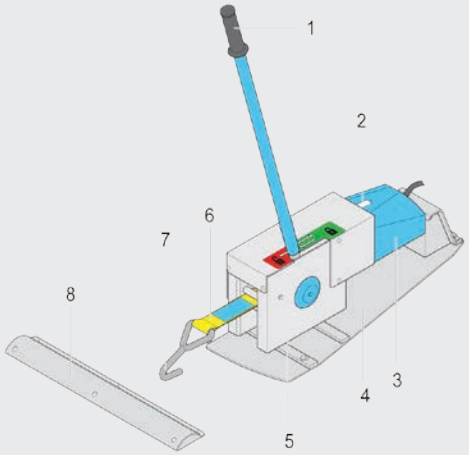

A revolutionary product that sets a new safety standard in the industry. The ASSA ABLOY M Truck Lock is a manual trailer restraint system that helps prevent accidents and injuries at the loading bay.

During the loading operation there is a risk that the trailer can roll away unintentionally from the loading dock due to the impact of the forklift truck traffic, a problem known as vehicle creep. The ASSA ABLOY M Truck Lock is the ideal solution to counter this risk. It allows the restraint of the trailer to be achieved from the inside of the loadhouse without any equipment being installed in the yard.

With this solution there is no obstacle on the yard which minimizes the risk of damages and injuries. Life endangering situations with people outside activating conventional wheel chocks or other devices are eliminated.

In the loading industry the challenges around safety are becoming more and more important. Growing demands from Work Bodies and Insurance Companies generate a certain pressure on the operators to focus on safe work places. The ASSA ABLOY M Truck Lock is the unique answer to all these aspects.

Overview

1) Operating Rod
2) Signal red / green
3) Tensionsing / preload unit
4) Baseplate
5) Roller house
6) Strap
7) Hook
8) Edge Proctection

Technical data

ASSA ABLOY M Truck Lock

Base plate	galvanized steel
Cover back part	painted blue RAL 5010
Cover front part and roller house	painted gray RAL 9006
Edge protection	stainless steel
Breaking point (max. restraining point)	35kN
Warning signal	siren sounds and flashing red signal at 12kN tensioning force
Siren	105 dBA
Power supply	24 V DC, 100mA
Electronic feature	interlocking of the dock leveler control box

Available kits for ASSA ABLOY M Truck Lock

Name	Fits to	Remarks
Truck lock complete	Autodock levelers	Only available in Sweden, Denmark, Finland and Norway
Truck lock complete with key switch	Autodock levelers	Only available in Sweden, Denmark, Finland and Norway Contains interlocking override

Benefits

Key benefits are:

- Prevents trailers from rolling away during loading
- Creates safe working conditions, avoiding injuries, damages and interruptions in the flow
- With this safety device there is no obstacle on the yard
- As the operation is inside the load house, life endangering situations with people outside in the driving area of trailers are avoided
- Fulfils the growing demands from Work Safety Bodies
- Is a reliable restrainer, even in icy and snowy conditions
- Warns drivers before reaching breaking point
- Has an extremely rugged strap that is difficult to break
- Is easily operated by one person
- Red/Green signal gives clear guidance to the operator
- Solid design with long lifetime at low operational cost (as well as low maintenance cost)
