## Enhance the safety of your high-speed doors with energy-efficient LED trafic light

## Albany LED signal systems improve personnel and vehicle safety on company premises

Key benefit

Safety

The importance of traffic lights in day-to-day traffic is obvious. But they are equally important in traffic on company premises. Here signal systems play an particularly important role on doors, since a closed door partially or totally restricts visibility. This can even lead to accidents in the worst case scenario.

Obsolete, poorly functioning lights, or lights with bulbs, also represent a high risk. Employees rely on the signals, but if those are poor or not visible they contain a high risk potential.

We therefore recommend to replace old lights, above all in order to improve personnel and vehicle safety.

Modern traffic lights are equipped with the latest LED technology and, with their low electricity consumption, represent an energy-efficient solution. In addition, LED traffic lights offer a significantly longer lifetime in comparison with traditional illuminat.

As an additional signal model especially for doors which are also used by pedestrians, we offer the option of fitting LED strips on the sideframe at eye level so that they can be seen more easily.
