Craft Brewing Excellence!

Premium Quality PUB/Micro Breweries, Now ***Made In India***!

Now Craft Brew with your own recipe and produce fine beers with "Hypro" Brew PUBs. Technology & Process Plant "Made In India" for Craft Brewing has been now made available by "Hypro". Customers now don't have to worry about service back up after sourcing a process plant from remote unknown suppliers. "Hypro" offers complete solution for Craft Brewing with its process plants designed and built to latest technology. Customers can now rely on systems provided by "Hypro" which would now set a trend.

Hypro Brew PUB systems come with SCADA based system operated on software "***Brew iT!***" specially designed by Hypro for the Brew PUBs. The system controls process parameters during brewing which are a key to fine beer production. Not only does "***Brew iT!***" controls the process but it also ensures consistency in brew batch after batch. Process operations are simplified with a touch of command and the transfers start operating the way you want them to. Our systems reduce operator dependability and results in ease of operation.

Hypro custom builds a Brew PUB system for you starting from 1 HL and above.

The Brew House which is very critical and instrumental for fine beer production is designed with features loaded for the brewer who demand nothing but the best!

Mashing in time, mash heating up rates, controlled agitation during mashing are prime to any brewer and we have made sure the brewer gets what he expects from the Mash Kettle.

When it comes to Lautering the worts, Hypro has been a step ahead to include superior rake systems which help the brewer to cut the grains and that too with a possibility to vary the height of deep cutting the grain bed. The rakes can move up and down so that deep cuts which normally disturb the clarity is only used when the beds are choked and not during normal process. The ultra low speeds during normal bed cutting serve to receive worts at desired speeds without affecting the wort clarity. Speed control of agitators is a feature included for all rotations.

Wort Boiling in "Hypro" systems is always preferred to be done using steam. Worts boiled using steam produce excellent wort with good flavour characteristics and result in fine hot break. Conventional systems operating wort boiling on electricity are done away with.

"Hypro" Whirlpools comes with a variable velocity wort entry into the whirlpool. The velocity is adjusted and fine tuned which results in good hot break for various beer brands.

'Hypro" Wort Cooling is based on energy saving principles derived from its industrial "Smart Wort Cooling Systems". Although the scale down is huge we still have applied the basics which result in energy saving.

A ventury type Wort Aerator completes the Brewing part and offers the brewer fine wort for fermentation.

The Brew Water Station is complete with dedicated Ambient, Ice & Hot brew water tanks with pumps for every tank to make the system simpler to operate.

Unitanks are carefully designed to process and hygienic requirements. They offer the brewer desired cool down rates prior to yeast removal and maintain temperatures during various process stages. The sampling is always done using "*KEOFITT*" membrane sampling valves which are directly welded to the vessel shell and need no drain out beer for sampling. There is no hold up of beer owing to pipes protruded for sampling as in conventional systems. With our systems the CIP of tank and associated piping is easy and operator doesn't have to make efforts for cleaning dead legs. Temperature is automatically controlled per recipe selected and time temperature profile is maintained as per selection. The vessels come with PUF Insulation which is foamed in situ a process which eliminates possibility of moisture ingress and burning out of insulation blocks during welding of the cladding.

All vessels are built with fine quality St St 304 L imported into India from Europe. The vessels are polished from inside and outside on automatic machine which produces superior finish on the vessels. Aesthetics are given due importance for the Brew PUB.

Hypro offers systems together with utilities like steam boiler, refrigeration, compressed air and water treatment. Dispensing stations are optional and by choice of the end customer to suit his needs.

With "Hypro" reliability you will get a system you can depend on. For your requirements our team shall be more than glad to craft a perfect Brew.

Hypro – The Lead Indian company which offers Reliable complete PUB Brewery Systems right from Raw Material Processing to product Beer including ancillaries and utilities.

Hypro is now a lead supplier of Micro Brewery Systems in India having to its credit four Micro Breweries already installed in metro cities of India like Bangalore & Mumbai. Hypro micro Breweries have been installed within a span of less than a year. Customers have been delighted to have "Hypro" systems which produce premium beers and are more than happy with the installations as they no longer have to depend on services and deliverables from overseas.

Hypro manufactures Premium range of modern Micro Brewery Plants which are step ahead in Technology, Craftsmanship and Superior Finish. The features offered can only be compared to the best in world.

HYPRO'S
MICRO BREWERY INSTALLATIONS

- **Namgay Heritage Brewery-Bhutan**
  20 HL Fully automated , Brew House, Unitanks, PLC based controls for process and transfer. Along with Apple Cider Plants, Complete packaging, kegging and perhaps the first microbrewery in the world to have a CO2 Recovery Plant (Capacity- 8 kg/hour)
- **The Great Beer Restaurant, Chandigarh**
  6 HL automated , Brew House, Unitanks, HMI based controls for process and transfer
- **Brew Bot-Mumbai**
  5 HL Semi- automated , Brew House, Unitanks,HMI based controls for process and transfer
- **The Paul, Bangalore**
  3 HL Semi- automated , Brew House, Unitanks HMI based controls for process and transfer
- **Brewsky, Banaglore**
  10 HL Fully automated , Brew House, Unitanks, PC based controls for process and transfer
- **Bangalore Brewworks**
  3 HL Semi- automated , Brew House, Unitanks, HMI based controls for process and transfer
- **White Owl, Mumbai**
  6 HL Fully automated, BBT's, Unitanks, CIP Systems, & Malt mill, PC based controls for process and transfer
- **Peitho Foods Pvt. Ltd, Panchkula**
  BBT-6HL x 4 Nos.
- **Gateway Brewing, Mumbai**
  Unitank-12 HLx 2 Nos.

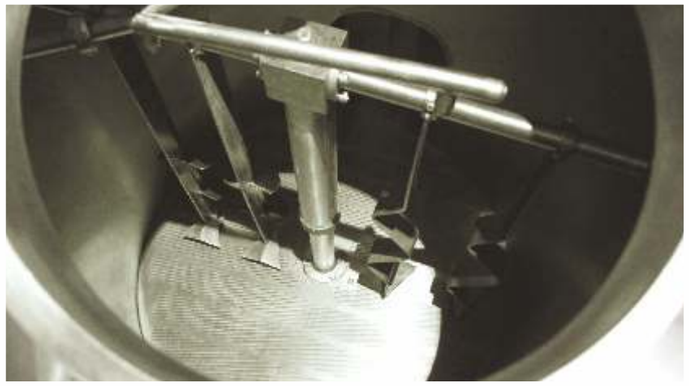

TESTIMONIALS

"Hypro 10HL Brewery System delivered on time, within budget and to specifications. Good customer service, support & communication. A reliable partner and vendor to be recommended."

Paul Chowdhury
GEIST Beer

"While setting up a project as complex as a craft brewery there are a billion things than can go wrong. Due to this very reason our company believed we needed someone who is firstly knowledgeable on the subject of brewing, reliable in terms of time lines and ability, but most importantly someone who can genuinely guide you when it comes to system configuration. In our search for the above we travelled the beer capitals of the world only to come back to find what we were looking for all this while so close to home! Not only did Hypro exhibit all the above--- mentioned attributes, but also constantly went out of their way to ensure all elements of the project shape up the way our company envisioned."

Anand K. Morwani
Director
Brewbot Eatery & Pub Brewery

"We have had a very good experience working with Hypro. We conceived of the idea of setting up a micro-brewery at our hotel The Paul Bangalore and we were able to complete the project from conceptualization to the first brew within 4 months. We short listed Hypro from a list of various manufacturers because of their commitment to quality of their finished products within the budgeted costs. Mr. Ravi Varma and his team of engineers and designers have been extremely responsive and cooperative to our specific requirements and patient with the various changes we had to make during the course of executing the project. The installation & testing of the plant was planned to perfection & the engineers were on hand to assist with and until we completed the first brewing process and to ensure that all the equipments were working perfectly. We highly recommend Hypro to all potential customers. HYPRO is surely a brand to be TRUSTED."

Shelley Thayil
Director Operations
Murphy's Brewhouse at The Paul Bangalore.
