A guide to preventative maintenance for Albany High Performance Doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in door opening solutions

Spiral cable

What is the function?

The spiral cable fulfills an important safety function - it transfers the electrical signal from the safety edge to the control unit.

What is the manufacturer's specification?

To make sure the manufacturer's specifications are observed, replace every:

- 300.000 cycles

Can I also replace it earlier?

Yes, if the spiral cable is heavily damaged or twisted, the spiral cable must be replaced.

How do they wear?

During the lifetime of the spiral cable there will be wear and tear due to:

- Friction or twisting
- Contact with moving parts
- Hardening due to aging

What is the risk of not replacing?

When not following the manufacturer's specifications the customer is taking the responsibility for unintended breakdown, e.g.:

In a situation where the spiral cable is out of order (e.g. short circuit), there will be a disturbance of the function of the door.

The door operation will turn into hold-to-run mode, which means that all automation modules are disabled for safety reasons.

Top reasons for preventive maintenance

- Keeps the warranty valid
- Prevents unexpected and expensive break-downs
- Prolongs lifetime
- Cost saving
- Minimises risk of personal injury
- Minimises energy loss
- Fulfills legal requirements
- Improves working environment
