A guide to preventative maintenance for Albany High Performance Doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in door opening solutions

Cable Chain

What is the function?

- Provides electrical connection of bottom beam to the control system, by guiding the cables inside the chain
- Protection of electrical cables through defined bending radii and directions, which reduces the physical damage

What is the manufacturer's specification?

To make sure the manufacturer's specifications are observed, replace every:

- 500.000 cycles

Can I also replace it earlier?

- Yes, if there are rips on the cable
- If the chain links get stuck and don't operate smoothly anymore
- If there is side movement of the chain links
- If functionality is lost due to shaking of the cable plugs (test during inspection)

How do they wear?

During the lifetime of the cable chain there will be wear and tear due to:

- Friction of the chain links / between cable and the chain links
- Bending of the cable during operation
- Hardening of plastic due to ageing and environment

What is the risk of not replacing?

When not following the manufacturer's specifications the customer is taking the responsibility for unintended breakdown, e.g.:

- The guiding may not be secured
- The door will reverse and stop in the upper position and will not run automatically, if the cables break
- Only hold-to-run mode will be possible
- The safety edge / pre-running photocell / crash signal may not function

Top reasons for preventive maintenance

- Keeps the warranty valid
- Prevents unexpected and expensive break-downs
- Prolongs lifetime
- Cost saving
- Minimises risk of personal injury
- Minimises energy loss
- Fulfills legal requirements
- Improves working environment
